

## CH : 2 [ 1 Mk que]

1. How Many Control Structures available in C ?
2. If any condition become false, statement following \_\_\_\_\_ will be execute.
3. In nested if first of all \_\_\_\_\_ condition will be checked.
4. How many flavors/types of If statement. Give name.
5. Which indicate easy way to represent multiple conditions at the same time?
6. Switch represent \_\_\_\_\_
7. If no any case value match with condition then statement following \_\_\_\_\_ will execute.
8. \_\_\_\_\_ statement is used to terminate particular case.
9. In switch case statement , any case value will be followed by \_\_\_\_\_ sign.
10. Write down syntax to represent switch statement.
11. Conditional operator also known as \_\_\_\_\_.
12. Syntax for conditional operator is \_\_\_\_\_.
13. In conditional operator \_\_\_\_\_ is used to indicate false part.
14. Conditional operator is similar to \_\_\_\_\_ statement.
15. Nested loop means \_\_\_\_\_ .
16. The first loop in nested loop is called \_\_\_\_\_.
17. The loop inside the first loop is called \_\_\_\_\_.
18. How many jumping statements available in c?
19. \_\_\_\_\_ statement is used to terminate from the loop.
20. \_\_\_\_\_ statement is used to pass control to the next iteration.
21. \_\_\_\_\_ statement is used to jump from one point to another point.
22. Looping statements are also known as \_\_\_\_\_ statements.

23. \_\_\_\_\_ Loop is known as Entry control loop.

24. \_\_\_\_\_ Loop is known as Exit control Loop..

25. In Do while Loop condition will be terminated with \_\_\_\_\_.

26. \_\_\_\_\_ Loop is known as faster loop in c.
